## 1. INTRODUCTION

The arrangement of this project is still in development.

The project involves comparison between users opinions of teaching premises to standards recommendations used in Iceland. This will be done with sound measurements, comparison of measurement results to standards and outcome of polls sent to teachers using relevant teaching premises. What is to be examined is for example reverberation time of variable room types (gymnasium, canteen, classrooms, open-landscape classrooms), sound insulation and sound pressure level from technical equipment.
